EDUCATION

UNIVERSITY OF SAN DIEGO SCHILEY MARCOS SCHOOL OF ENGINEERING

San Diego, CA

Bachelor of Science in Computer Science, Cybersecurity Concentration

May 2027

Mathematics Minor

- Relevant Coursework: Computational Problem Solving (Python), Prog Abstractions and Methods (Python), Advanced Comp Problem Modeling (Java), Intro to Computer Systems (Linux, C), Networking (C, C++), Object-Oriented Software Design (Java)
- Skills: Python, Java, C++, C, Linux, VIM
- Operating Systems: Microsoft Windows, IOS, Visual Studio Code, Adobe, IntelliJ

EXPERIENCE

SAN DIEGO FOOTBALL CLUB TAKES

San Diego, CA

Data Analytics Intern

January 2026 - Present

- Produced data-driven match analysis posts covering possession %, xG, shot maps, passing networks, and tactical formations for San Diego FC matches.
- Created pre-match statistical previews analyzing opponent trends (average possession, defensive line height, xGA), helping followers understand matchup advantages and tactical expectations
- Identified tactical adjustments (e.g. mid-block press to high press, inverted fullbacks, double pivot shifts) and explained how they influenced goal creation or defensive solidity

7-ELEVEN #24147

Sacramento, CA

Data Entry, Customer Service Representative

January 2020-August 2024

- Developed and maintained structured financial records for four business locations using spreadsheets and database tools, ensuring accuracy in daily sales, expense tracking, and bank reconciliations
- Assisted in financial data analysis for budgeting, inventory cost evaluation, and monthly reporting; contributed insights to improve profitability and operational efficiency
- Collaborated with a functional team to streamline data management, ensure accurate financial systems, and support reporting and compliance through effective communication and coordination

PROJECTS

Design WORDY Program Project

Spring 2025

- Designed and implemented a Wordle-style game using Python and the Tkinter GUI library, applying the Model-View-Controller (MVC) architecture to separate game logic, interface, and control flow.
- Built interactive game features including dynamic keyboard input, guess validation, and animated letter color feedback based on correctness using event-driven programming and custom exception handling
- Incorporated file I/O for user input logging, developed modular, testable code with pytest and assert-based testing to ensure functionality and maintainability.

Design BLOCKY Program Project

Spring 2025

- Designed and implemented a recursive tree-based board game in Python, modeling hierarchical data using a quadtree structure and rendering interactive game states with Pygame.
- Applied object-oriented programming and inheritance to build a flexible class system supporting multiple player types (human, random, smart) each with unique scoring logic and behavior.
- Developed and optimized algorithms for goal-based scoring using blob detection and 2D grid transformations, enabling real-time feedback.

ACTIVITIES

Member: USD Association for Computing Machinery

Member: USD SASE- Society of Asian Scientists and Engineers
